Research areas

The institute's work is divided into four major topics that are researched by its 42 (permanent and affiliated) lecturer-researchers :

- **Space(s)** including cyberspace and outer space;
- **Territory(ies)** - research in this area is not limited to the study of territorial authorities, it also includes sociological, economic and heritage aspects;
- **Culture(s)** - a relatively broad topic encompassing museums, trademarks and domain names;
- **Communication(s)** covers both the methods (electronic communication, networks, infrastructures and electronic platforms) and the contents (audio-visual communication, cinema, e-commerce).

The Spaces research team is augmented by faculty staff and PhD students from the Toulouse Business School, working with the [Sirius Chair](#).
