Space Talks 2019 : MOVING FAST ? Implications of Space Business Acceleration. Conference organised by the Sirius Chair

ON THE OCTOBER 15, 2019

Université Toulouse 1 Capitole
Salle des séminaires - Bibliothèque de l'Arsenal [niveau -1]

SIRIUS workshops are held every year in the Assemblée room of the Région Occitanie hotel. They are organised by the SIRIUS Chair, a business chair linking Toulouse 1 Capitole University, Toulouse Business School, CNES, Airbus Defense and Space, and Thales Alenia Space.

The acceleration of technological progress in the space sector raises major questions. Is this acceleration real or only felt? How to measure it? What could be the consequences from the point of view of industrial strategies? In which areas of space activities can such an acceleration be anticipated? What will the pace be? The SIRIUS Chair's research team takes stock of all these questions and tries to provide useful answers, with the help of five keynote speakers from different geographical horizons, sectors and scientific disciplines.

Presentations are made in English, but discussions are held in both French and English. They are addressed to all those interested in accelerating the progress of space technologies and in the very rapid development of a new industrial, economic and financial ecosystem.
